

S.A.F.E. Delivery Driving

Storyboard | Final | 6 March 2018

ISD/Author: Alison Weinberg | email@email.com

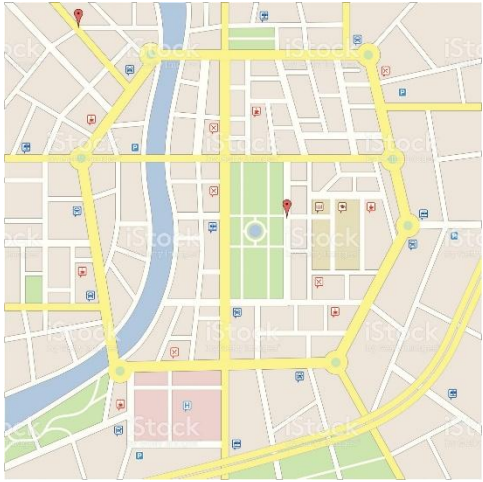

Course Objectives

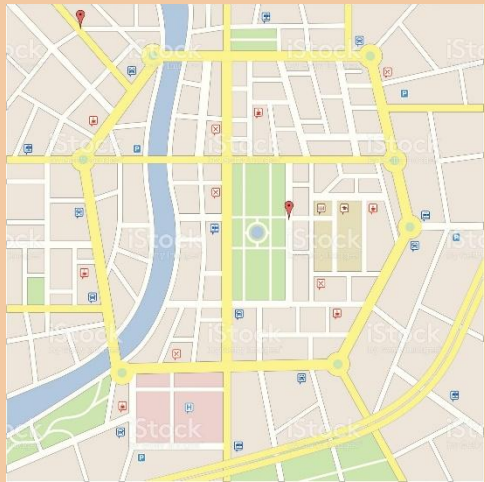

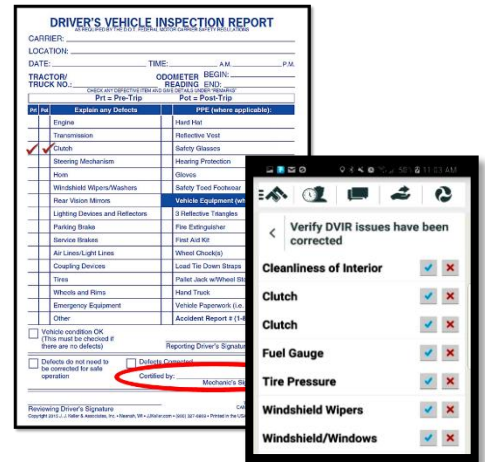

After completing this course, learners will be able to:

- Learn what to look for during a daily vehicle inspection
- Learn how to safely enter and exit your vehicle
- Learn how to safely secure a load before departing
- Review safe driving practices
- Identify safety rules for backing up your delivery vehicle
- Review emergency and post-trip procedures

- Sections or Chapter Slides
- Activity Slides
- Knowledge Check Slides
- Video

Slide #	Slide title	Narration	Onscreen slide content	Graphics/media	Notes
1.1	S.A.F.E Delivery Driving	Welcome to this online training course on S.A.F.E Delivery Driving. ABC Company is dedicated to the health and safety of every employee. We've put together these training materials to help you to do your part by thinking and practicing S.A.F.E. Stay Alert and Focused Every day!	S.A.F.E. Delivery Driving This course is required for all employees who operate a vehicle to deliver product on company business. ABC Company is dedicated to the health and safety of every employee. This training will help you do your part by thinking and practicing SAFE. Stay Alert and Focused Every day! This course contains audio narration.	Think 	

1.2	Importance of S.A.F.E. Driving	As a delivery driver, your ability to control your vehicle safely depends on how well you understand the hazards you face on the road. When you use S.A.F.E. driving practices, you are not just looking out for yourself. You are also looking out for the safety of others. That's why it's important that you maintain your vehicle in good condition, follow the rules of the road, and stay alert and focused at all times while driving.	Importance of S.A.F.E. Driving Safe driving practices are for your own safety, and the safety of others. Maintain your vehicle in good condition. Follow the rules of the road. Stay alert and focused at all times when driving.		
1.3	Course Objectives	By following along with this course, you'll learn what you need to do to get ready, like what to look for during you're daily vehicle inspection and how to safely enter and exit your vehicle. Then you'll learn how to safely secure your load before departing. After that, you'll review general reminders for staying safe while driving your route. And later, you'll discover three important safety rules to follow when backing up your delivery vehicle.	Course Objectives Learn what to look for during you're daily vehicle inspection Learn how to safely enter and exit your vehicle. Learn how to safely secure your load before departing. Review safe driving practices. Identify safety rules for backing up your delivery vehicle.	Introduce map concept with markers along a closed loop route, to be revisited at the start of each section of the course. 	

		Lastly, you'll review what to do in case of any emergencies, as well as at the end of every day. Let's get started.	Review emergency and post-trip procedures Let's get started.		
2.1	Check Your Vehicle	Before you can load it or drive it anywhere, you must thoroughly check your vehicle, inside and out.	Check Your Vehicle [Click to Continue]		Map Marker #1 is clickable object.
2.2	DVIR	Each driving day begins with Daily Vehicle Inspection Report, or DVIR. Every driver is responsible for preparing a Pre-trip & Post-trip DVIR, and listing any conditions that would affect the safety of the delivery vehicle. DVIRs are performed utilizing paper or digital technology. These DVIRs are required by law and are designed is to ensure the vehicle is maintained in a safe driving condition for you and the public at	Daily Vehicle Inspection Report (DVIR) Every driver is responsible for preparing a Pre-trip & Post-trip DVIR. List any conditions that would affect the safety of the vehicle. DVIRs are performed utilizing paper or digital technology.		Attach video to resources?

		large. So it's important to perform these daily inspections the same way each day.	DVIRs are required by law to ensure vehicles are maintained in safe driving condition. Perform daily inspections the same way each day.		
2.3	Start Inspection	Choose your next step to continue.	What would you like to check first? Check the Exterior Check the Interior	Clickable object: truck exterior → slide 2.4 Clickable object: truck interior → slide 2.5-2.9	Branching Activity Complete → slide 2.10
2.4	Vehicle Inspection Checkpoints	No matter what delivery vehicle you may be driving – a van, flatbed truck, box truck, sprinter vehicle, trailer or an F150 – you will be looking for the same items when performing your inspection to make sure your vehicle is safe to operate. Your attention to detail is critical. Drag the slider to rotate this delivery truck and review the vehicle inspection checkpoints.	Drag the slider to rotate this delivery truck and review the vehicle inspection checkpoints.		Return to 2.3 after all layers have been visited.
2.4A	Wait		Wait! More checkpoints need your attention. [KEEP LOOKING]		

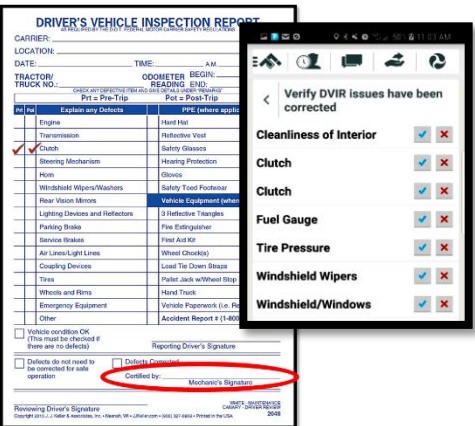

2.4B	The Approach	As you approach the vehicle, look for any leaking/dripping fluids under the vehicle and take note of any damage to the exterior finish.			
2.4C	Windows & Mirrors	Make sure that the windshield and windows are clean and that nothing is blocking your vision. Also check the mirrors. Make sure they are properly adjusted and clean.			
2.4D	Signals & Lights	Make sure that your headlights, hazard lights, turn signals, horn other warning signals are all working properly.			
2.4E	Under the Hood & Chassis	Make sure there is no evidence of leaking fluid under the vehicle. Check the oil, transmission, clutch, steering, and brakes, including the parking brake.			

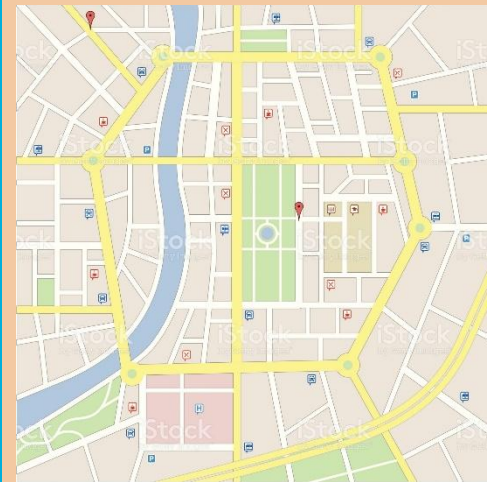

2.4F	Doors & Steps	Check that all doors – including rear doors – can be opened and closed securely, and that steps and platforms are operational and sturdy.			
2.4G	Tires	Make sure all tires appear to be properly inflated, and that the tread is intact. Do not drive a delivery vehicle with tires that have exposed steel-cord or ply-cord. Note it on your DVIR and alert your manager or supervisor.			
2.4H	Lift Gate	If your vehicle has one, inspect the lift gate to make sure everything is operational and secured. Check for hydraulic leaks and make sure coupling devices are functioning properly. If anything is not working properly, note it on your DVIR. Never try to make repairs yourself.			

2.5	Entering the Delivery Vehicle	In order to inspect, drive, and safely operate your delivery vehicle, you need to be able to climb into and out of it safely. This sounds simple enough, but slips, trips, and falls are unfortunately all too common. Always face the vehicle and maintain three points of contact when entering – and exiting – the cab. Three points of contact could be one hand and two feet, or two hands and one foot. Avoid having items in your hands – like a phone or a clip board. By keeping your hands free, you can obtain a good (closed) hand-grip. Also remember to pay attention to where you place your feet.	Entering the Delivery Vehicle Avoid slips, trips, and falls. Always face the vehicle. Maintain three points of contact. 1 hand + 2 feet 2 hands + 1 foot Keep your hands free of cell phones or other items. Obtain a good hand-grip. Pay attention to where you place your feet.		Advance to 2.6
2.6	Controls & Gauges	Once inside the cab, refer again to the DVIR checklist. Make sure the dash controls and gauges are all operational, and take note of the mileage shown on the odometer. Also check to make sure you have enough gas! If you have any questions in regards to operating a delivery vehicle, your supervisor can familiarize you with the vehicle	Check Controls & Gauges Make sure the dash controls and gauges are all operational. Note the mileage on the odometer. Your supervisor can familiarize you with the vehicle you will be operating and the location of all controls/gauges.		Advance to 2.7

		and the location of all controls/gauges.			
2.7	Emergency Equipment	Make sure that you have the necessary equipment for your vehicle. This can include: • PPE, such as safety glasses, gloves, a reflective vest, or hard hat; • three reflective triangles; • a fire extinguisher; • wheel chocks; • load tie-down straps; • a pallet jack or hand truck; • a first-aid kit; • and up-to-date vehicle paperwork. Report anything missing to your supervisor right away.	Emergency Equipment Make sure that you have following: • PPE • 3 reflective triangles • Fire extinguisher • Wheel chocks • Load tie-down straps • Pallet jack and/or hand truck • First-aid kit • Up-to-date vehicle paperwork		Advance to 2.8

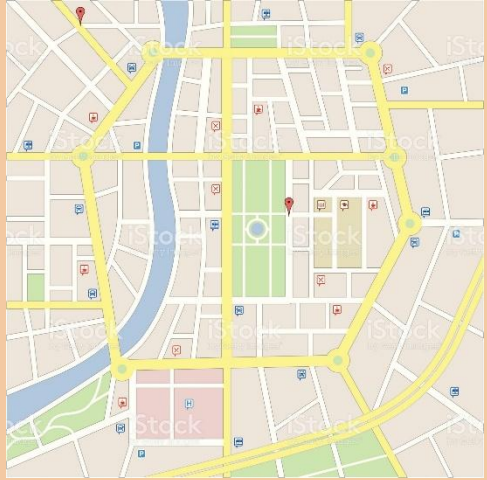

2.8	Keep it Clean!	Finally, make sure the truck cab is clean and organized. Secure any loose objects, and remove objects that can't be tied down. Remember, well-maintained and clean equipment draws less unwanted attention, and makes a better first impression than the alternative.	Keep It Clean! Well maintained, clean equipment draws less attention	 <i>Please use multiple pictures showing unclean cabs (pictures are attached)</i>	Advance to Return to 2.9
2.9	Exiting the Delivery Vehicle	Climbing down from your vehicle requires the same level of focus and attention as climbing in. Never jump from the cab or the cargo box! Stay safe by facing the vehicle, and slowly backing out of the cab, being sure to maintain three points of contact at all times. Avoid having items in your hands & keep your weight on your hands as you slowly lower one foot at a time. Watch where you are going, and look for potholes, uneven surfaces, rocks, and other obstructions when stepping out of your vehicle. Be extra cautious in inclement weather.	Exiting the Vehicle Never jump from the cab or the cargo box! Face the vehicle. Back out slowly. Maintain three points of contact at all times. 1 hand + 2 feet 2 hands + 1 foot Keep your weight on your hands. Lower one foot at a time. Watch where you are going. Look for potholes, uneven surfaces, rocks, etc. Be extra cautious in inclement weather.		Return to 2.3

2.10	DVIR Complete	Here's what to do when you've finished the DVIR: If you are using the paper DVIR, give a copy of it to your supervisor & remember to keep another copy of it in your vehicle. The Digital DVIR is stored electronically.	DVIR Complete! If you are using the paper DVIR: Give a copy of it to your supervisor and Keep another copy in your vehicle. The Digital DVIR is stored electronically.	DVIR checklist with everything checked off. <i>(please also show the digital image)</i> 	
2.11	Failed Inspection	Here's an important question. What would you do if you noticed a problem while completing your daily vehicle inspection report? Choose your response to continue.	Knowledge Check: Inspection Failure What would you do if you noticed a problem while completing your daily vehicle inspection report? Go home early Report the problem to a supervisor Drive the truck anyway		Multiple Choice
2.11A	Failed DVIR Feedback Correct	Good call! Always be sure to immediately report any problems you encounter during your inspection to your supervisor.	Good call! Immediately report any problems you encounter while inspecting your delivery vehicle to your supervisor.	Stop Sign	

2.11B	Failed DVIR Feedback Incorrect	That isn't correct. Always be sure to immediately report any problems you encounter during your inspection to your supervisor.	Nope. Immediately report any problems you encounter while inspecting your delivery vehicle to your supervisor.		
3.1	Safe Loading and Unloading	You've completed your DVIR, and everything checks out. Time to load up!	Safe Loading and Unloading [Click the map marker to continue]		Map Marker #2 is clickable object.
3.2	Safe Lifting	Whenever you load and unload your vehicle, always remember to practice safe lifting techniques. Keep objects close to your body, your back straight, and lift with your legs not your back. Never lift or move more than you can easily handle.	Safe Lifting Always remember to practice proper lifting techniques when loading and unloading your vehicle. • Keep objects close. • Keep your back straight. • Lift with your legs. • Never lift more than you can handle.		

3.3	Loading Equipment	If an object is too heavy to move by yourself, get help or use a loading equipment to make the job easier. Remember, if you need equipment to load your cargo, you'll need it to unload as well. Bring any necessary equipment with you, or ask the customer if they have similar equipment at the delivery site before you depart.	Loading Equipment Use a loading equipment to safely move heavier objects. Bring equipment with you to use when unloading or confirm that the customer has similar equipment you can use.		
3.4	Lift Gate Safety	Some trucks may require the use of a lift gate for loading and unloading cargo. Be aware of the dangers in operating lift gates, and stay focused when using them to prevent risk of injury. Make sure the operational space for your lift gate is clear of any hazards, including yourself and bystanders. Keep your hands and feet clear of pinch points. Always PUSH – NEVER PULL – cargo from the trailer bed onto the lift gate. If a load does start to fall, don't try to save it: let it go. After using it, make sure the lift gate is safely and properly returned to its locked and secured position.	Lift Gate Safety Be aware of the dangers in operating lift gates. Stay focused when using them to prevent risk of injury. Make sure the operational space for your lift gate is clear. Keep your hands and feet clear of pinch points. PUSH – NEVER PULL – cargo from the trailer bed onto the lift gate Make sure the lift gate is safely & properly returned to its locked and secured position after use.	Stock image of truck with lift gate	

3.5	Securing Loads	Only load what your vehicle can carry safely. Make sure all cargo is properly secured, and confirm that it isn't blocking your view of traffic around you. There should be no movement of the platform when it is properly stowed. Work with your manager or supervisor to demonstrate proper techniques for securing a load. And, remember that it takes longer to stop when driving with a heavy load. Leave extra room between your vehicle and the vehicle in front of you.	Securing Loads Only load what your vehicle can carry safely. Make sure cargo is properly secured. • Not blocking your view • No movement Work with your manager or supervisor to demonstrate proper techniques for securing a load. [--] Remember that it takes longer to stop when driving with a heavy load. Leave extra room between your vehicle and the vehicle in front of you.	Please also use the images of items being properly secured – attached. 	
3.6	Knowledge Check	Before we continue, let's pause for a quick knowledge check. Choose the word that best completes the sentence, then click 'SUBMIT'.	Knowledge Check: Lift Gate Safety Always _____ cargo from the trailer bed onto the lift gate. • push • pull		
3.6A	Knowledge Check Feedback Correct	That's right! Always PUSH – NEVER PULL -- cargo from the trailer bed onto the lift gate.	That's right! Always PUSH – NEVER PULL -- cargo from the trailer bed onto the lift gate.		

3.6B	Knowledge Check Feedback Incorrect	Sorry, that is incorrect. Always PUSH – NEVER PULL -- cargo from the trailer bed onto the lift gate.	Incorrect. Always PUSH – NEVER PULL -- cargo from the trailer bed onto the lift gate.		
4.1	S.A.F.E. Driving	You've inspected your vehicle. Your load is secure. Now it's time to get behind the wheel.	S.A.F.E. Driving [Click the map marker to continue]		

4.2	Buckle Up!	Your seatbelt, or safety belt, is the most important safety device in your vehicle. It can save your life! Delivery drivers are required by law to wear seatbelts when operating commercial vehicles. Failure to wear your seatbelt is a <u>7-Point</u> CSA violation! Always make sure you, and any passengers you happen to be traveling with, buckle up before you go!	Buckle Up! Your seatbelt, or safety belt, is the most important safety device in your vehicle. It can save your life! Delivery drivers are required by law to wear seatbelt when operating commercial vehicles. Failure to wear your seatbelt is a <u>7-Point</u> CSA violation! All passengers must wear seatbelts too.		
4.3	Eliminate Distractions	Next, put away your cell phone. Driving requires your total attention. Don't do anything while driving that may be a potential distraction. While operating a delivery vehicle, it is against the law to make and take handheld phone calls; send and read text messages; check your email or voicemail; or lookup directions to your destination. If you must make or take a call, use a hands-free device, such as a Bluetooth headset. This allows you to keep both hands on the	Eliminate Distractions Put away your phone! Driving requires your total attention. Don't do anything while driving that may be a potential distraction. NO Handheld Phone Calls NO Texting NO Checking Email or Voicemail NO Internet [OK] Hands-free / Bluetooth [OK] Pull-Over [OK] Program GPS BEFORE You Go!		

		wheel! No Bluetooth? Pull over! And if you use GPS, program your destination before you go, and use an audio prompt so you don't have to look at your phone.			
4.4	Obey Traffic Laws	Pay careful attention to traffic signs that can alert you to important traffic and safety information like speed limits, weight and axle limits, and overhead clearance dangers in your path. Know the height and weight of your truck and plan your route so that you avoid any potential hazards. And always be mindful of pedestrians, cyclists, and other drivers on the road, including motorcyclists. If possible, time your trip to avoid peak road congestion. To prevent accidents, use warning signals and eye contact when merging and yielding. Remember, traffic laws exist to keep <i>everyone</i> safe. Do your part by always obeying them.	Obey Traffic Laws Stay alert! Pay attention to traffic signs. Know the vehicle height & weight limits. Plan your route to avoid hazards. Share the road! Use warning signals and eye contact.		
4.5	Avoid Unsafe Behavior	Harsh braking and speeding are among the most unsafe driving behaviors. Click to learn more.	Avoid Unsafe Behavior Speeding Harsh Braking		Click to Reveal Instructional prompt TBD.

4.5A Speeding

Speeding is dangerous for many reasons. The faster you're going, the longer it takes to stop, giving you less time to react to changing road conditions. It also increases the chance of being killed or injured in a collision, as more speed means more force absorbed by your vehicle and your body in a crash.

It's imperative that you always follow the speed limit, even if you're late. It's not worth getting in an accident or even losing your life.

So what determines proper speed? Simply put, it's the speed at which you always have control of your delivery vehicle (and it's *never* over the legal limit).

Remember speed limits are posted for a reason, and that reason is SAFETY!

Speeding

The faster you're going, the longer it takes to stop.

- Gives you less time to react to changing conditions
- Increases the chance of being killed or injured in a collision

Always follow the speed limit!

It's not worth getting in an accident or even losing your life.

Remember speed limits are posted for a reason & that reason is SAFETY!

4.5B	Harsh Braking	Following the vehicle in front of you too closely could lead to rear-end collisions. Remember: when operating a delivery vehicle, it's important to <i>increase</i> the distance between you and the vehicles in front of you as it takes longer to stop due to the increased weight and size of the delivery vehicle. The minimal safe distance is 6-7 seconds. Leaving a safe distance between your delivery vehicle and the one in front of you will give you enough time to react if the vehicle in front of you has to come to a complete stop. Other strategies include slowing down, keeping your eyes on the road, and NOT driving aggressively.	Harsh Braking Following too closely could lead to rear-end collisions. Remember to keep 6-7 seconds of a safe distance between your delivery vehicle and the one in front of you. Slow down, keep your eyes on the road, and avoid aggressive driving.		
4.6	Drive Defensively	Defensive drivers anticipate changes in the road conditions – likely the result of adverse weather conditions or the mistakes of other drivers – and they are ready to react. In other words, they expect the unexpected. Here are some tips for driving defensively. Start by keeping your mind on your driving and your hands on the wheel at all times.	Drive Defensively Reduce your risk of collision by anticipating dangerous situations – like adverse weather conditions or the mistakes of other drivers. Expect the unexpected! [--] Defensive Driving Tips: • Hands on Wheel • Always Be Scanning • Check Mirrors • Maintain a Safe Distance		

		Keep your eyes moving, too. Watch the traffic immediately around you, and on the road ahead. And check your mirrors regular to stay aware of traffic behind you. Keep a safe distance from the vehicle ahead of you, and allow other drivers to pass you if they are determined to get there first. Finally, always have an escape route in mind, just in case something suddenly changes.	• Yield • Have an escape route		
4.7	Adjust to Conditions	Take additional precautions when driving at night, or in bad weather. Turn on your headlights to make it easier to see, and easier for others to see you. Be extra alert for pedestrians and cyclists who may be especially difficult to see. Remember that wet roads make it more difficult to stop quickly. Slow down and increase the distance between your vehicle and the vehicle in front of you, so you can stop safely. Be extra careful on curves and at intersections where accidents are most likely to occur.	Adjust to Driving Conditions • Use windshield wipers AND headlights • Watch for pedestrians and cyclists • Slow down • Leave extra space • Be extra careful on curves and at intersections		

4.8	Knowledge Check	Let's pause now to look at some examples of driving behavior. Which of these would you consider safe driving practices? Drag the statements into place based on whether they describe safe or unsafe driving practices. Click 'SUBMIT' when you are done.	Knowledge Check: Safe Driving Which of these would you consider safe driving practices? [SAFE] [NOT SAFE] Send a text message to your customer while waiting at a stoplight to let them know you're running late. Buckling up every time you get behind the wheel. Update your social media status to let everyone know how slick the roads are out there today! Leave extra space between you and the vehicle in front when roads are wet and/or you are carrying a heavy load. Program your destination into your GPS after you're already on the road. Eliminate all distractions and obey all traffic laws.		Drag & Drop Activity Drag text blocks to drop target. Bounce back to starting location if incorrect.
4.8A	Knowledge Check Feedback Correct	Great job! Now you know what's safe—and what's NOT safe—behavior when you're out on the roads.	Great job! [show answer choices marked correct or incorrect]		

			Rule #3: When You Must Go, Go Slow!		3 → 5.7
5.4	Rule #1: Avoid Backing	Rule #1: Whenever possible, avoid backing up. One way you can accomplish this is by thinking about your departure upon arrival, and giving yourself an out. Always choose the safest parking location and backing path.	Rule #1: Whenever Possible, Avoid Backing Think about your departure upon arrival. Choose the safest parking location and backing path.	 We need to utilize an image other than a tractor trailer – a van or a box truck	
5.5	Rule #2: G.O.A.L.	If you must back up, remember Rule #2: GOAL. GOAL stands for: G et O ut A nd L ook Once you are in position to back up, <i>get out of your vehicle</i> and <i>walk all the way around it</i> – also called a circle check -- to make sure there are no potential hazards that might cause problems, including pedestrians, other vehicles, low overhanging objects, or anything else which may not be visible in your mirrors.	RULE #2: G.O.A.L. If you must back up, remember: G et O ut A nd L ook Walk all the way around your vehicle to make sure there are no potential hazards, including: • Pedestrians • Other vehicles • Low overhanging objects • And more...		

5.6	G.O.A.L. Practice Exercise	Drag the slider to simulate completing a circle check before backing.	Drag the slider to complete a circle check.	 Rotate the 3D truck. Have hazards appear on screen when the learner scrolls to the rear. Hazard #1: Pedestrian Hazard #2: Low-Hanging Branch (but not too low) Hazard #3: Hand-truck
5.6A	Hazard #1 [Pedestrian]	N/A	Make eye contact with any pedestrians or other drivers. Make sure they know you will be backing, so they can get out of the way!	
5.6B	Hazard #2 [Small Object]	N/A	Remove any small objects that may be in your path. Do not back if there are large, unmovable objects in your path.	

5.6C	Hazard #3 [Low Clearance]	N/A	Do not back if there is not enough overhead clearance. Looks like this tree branch is just high enough.		
5.6D	G.O.A.L. Feedback	All clear! Good thing you got out of the cab and walked all the way around the vehicle before backing!	All clear!		Reveal when the truck has made one complete revolution.
5.7	Rule #3: Go Slow	Rule #3: Go Slow. After walking all the way around the vehicle, back up as soon as possible so that conditions don't change. Always back from the driver's side if you have a choice, and use a guide if available. Position yourself that you can clearly see as much as possible behind you. While backing, keep your eyes moving, scanning the entire area for hazards. Use eye contact to communicate with nearby pedestrians and other drivers. Make sure everyone sees you. Use your mirrors and warning devices.	Rule #3: Go Slow After walking all the way around the vehicle, back up as soon as possible so that conditions don't change. • Back from the driver's side, if possible. • Use a guide, if available. • Position yourself to see as much as possible. • Keep your eyes moving. • Use eye contact to communicate with others. • Use mirrors and warning devices. • Take it slow! • Back only as far as necessary.		

		And, above all, <i>take it slow</i>. Finally, back only as far as you must, and avoid the close calls.			
6.1	Staying Safe in an Emergency	Although we hope you'll never have any trouble, it's important to know what to do in an emergency. Let's review now.	Staying Safe in an Emergency		
6.2	Emergency Procedures	If you have vehicle trouble, pull as far off the road as safely possible to avoid causing an accident. Once you stop, secure the area by activating the vehicle's hazard lights or four-way flashers. Beware of oncoming traffic when exiting the vehicle. Set out reflective triangles within 10 minutes of stopping. Take care to place them at the rear of the vehicle, facing approaching traffic, at approximately 10, 100, and 200 feet from the vehicle.	Emergency Procedures If you have vehicle trouble, pull as far off the road as possible to avoid causing an accident. 1. Turn on hazard lights. 2. Place reflective triangles • within 10 minutes • 10', 100' and 200' 3. Call for help.		

		Once the area has been properly secured, notify your branch and provide a description of what has happened.			
6.3	Accident Reporting	In the event of an accident: • Do not admit fault to anyone. • Call the Police. • Get the names, contact information, & insurance information of other parties. • Take photos with your cell phone. • Report the accident and any injuries you may have to your supervisor. • All delivery vehicle accidents must be reported – no exceptions.	Accident Reporting • Do not admit fault to anyone. • Call the Police. • Get the names, contact information, & insurance information of other parties. • Take photos with your cell phone. • Report the accident and any injuries you may have to your supervisor. • Accidents need to be reported ASAP!		

7.1	Route Complete!	You've completed your route. Just one more thing before you can call it a day.	Route Complete!		
7.2	Post-Trip Inspection	Once you've completed your route, you must conduct a post-trip inspection of your delivery vehicle. The post-trip inspection is just as important as the pre-trip inspection. This is your opportunity to any document problems you noticed while operating the vehicle that day. Consult the digital or paper DVIR checklist and conduct the post-trip inspection the same way as the pre-trip inspection. If you identify any issues, please note them on the DVIR & alert your supervisor so they can make	Post-Trip Inspection You MUST conduct a post-trip inspection of your vehicle. Document any problems you noticed while operating the vehicle that day. Conduct the post-trip inspection the same way as the pre-trip inspection. If you identify any problems, take action. Follow-up and see that necessary repairs get made.	 (please also show the digital image)	

		sure to see that necessary repairs get made. And as a reminder - these DVIR's are required by law & are designed to ensure the vehicle is maintained in a safe driving condition for you and everyone else on the road.			
8.1	Conclusion		Conclusion		
8.2	Summary	Congratulations! You've completed the knowledge portion for this course on S.A.F.E. delivery driving. You should now be able to: • Conduct daily pre- and post-trip vehicle inspections • Safely enter and exit your vehicle. Safely secure your cargo load. • Practice safe driving. • Safely back up your vehicle. • And stay safe in an emergency by following proper procedures. Driving demands 100% of your attention 100% of the time. Remember to do your part by thinking and practicing SAFE.	Congratulations! You've completed the knowledge portion for this course on accident prevention in the warehouse. You should now be able to: • Conduct daily pre- and post-trip vehicle inspections • Safely enter and exit your vehicle. Safely secure your cargo load. • Practice safe driving. • Safely back up your vehicle. • And stay safe in an emergency by following procedures Driving demands 100% of your attention 100% of the time. Remember to do your part by thinking and practicing SAFE.	Think 	

		Stay Alert and Focused Every day! Don't learn it by accident!	Stay Alert and Focused Every day! Don't learn it by accident!		
8.3	Thank You	You can now close this window and proceed to the quiz. You must complete the quiz with a score of 90% or higher to pass.	Thank you! You can now proceed to the quiz. (Earn a score of 90% or higher to pass.)		

LMS Assessment

Q#	Type	Question	Answer Choices	Feedback	Notes
1	Multiple Choice	What of these is NOT a strategy for driving safely in bad weather?	Turn on your headlights. Slow down. Increase the distance between your vehicle and the vehicle in front of you. Run through yellow lights to avoid skidding through intersections.	Remember to take extra caution when driving in bad weather. Slow down, turn on your headlights, and increase the distance between your vehicle and the vehicle in front of you.	
2	True or False	Daily DVIRs are required by law.	True False	It's true! Daily DVIRs are required by law.	

3	True or False	Each delivery driver is responsible for completing a pre-trip and post-trip inspection every day.	True False	Yes. Every delivery driver is responsible for completing a pre-trip and post-trip inspection every day.	
4	Multiple Choice	To reduce the chance of slipping and falling when entering and exiting your vehicle, you should always:	Jump in and out of the cab. Use the tires to give you a step-up. Maintain three points of contact. Hold onto a rope or a tether tied to the steering wheel.	Maintain three points of contact – 2 hands, 1 foot or 2 feet, one hand – to reduce the chance of slipping and falling when entering and exiting your vehicle.	
5	Multiple Choice	Failure to wear your seatbelt is a _____ CSA violation!	1-point 3-point 5-point 7-point	Failure to wear your seatbelt is a 7-point CSA violation!	
6	True or False	Braking time and distance is the same when you are carrying a heavy cargo load as when your cargo area is empty.	True False	It takes longer for your vehicle to come to a complete stop when carrying a heavy cargo load.	
7	Multiple Choice (Choose All)	You can avoid potential hazards by:	Ignoring road signs. Planning your route. Keeping your gaze fixed on the vehicle in front of you. Expecting the unexpected.	You can avoid potential hazards by paying attention to road signs, planning your route, keeping your eyes moving at all times, and expecting the unexpected.	Choose all that apply.
8	Multiple Choice	When operating a delivery vehicle, the minimal safe distance between you and the vehicle in front of you is 6-7 seconds .	True False	Because it takes longer to stop a delivery vehicle due to the increased weight & size, the minimal safe distance is 6-7-seconds .	
9	Multiple Choice	You can avoid backing by:	thinking about your departure upon arrival and leaving yourself an out. completing a DVIR.	You can avoid backing by thinking about your departure upon arrival and leaving yourself an out.	

			completing a circle check. setting out reflective triangles.		
10	Multiple Choice	Before backing up, get out and _____ to make sure there are no potential hazards.	walk to the rear of the vehicle walk to the passenger side of the vehicle walk all the way around the vehicle set out reflective triangles	Before backing up, get out and walk all the way around the vehicle to make sure there are no potential hazards.	
11	Multiple Choice	In an emergency, set out reflective triangles _____.	within 10 minutes of stopping. at the rear of your vehicle facing approaching traffic. at distances approximately 10, 100, and 200 feet from your vehicle. All of these are correct.	In an emergency, set out reflective triangles within 10 minutes of stopping, at the rear of your vehicle facing approaching traffic, at distances approximately 10, 100, and 200 feet from your vehicle.
